EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and or additions be unacceptable to the applicants, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Prior to this Office Action, the Examiner has an interview with Ms. Gina Bibby dated June 5, 2007. Applicant agrees with the changes suggested by the Examiner to the abstract and a copy of the amended abstract, has been faxed by the Applicant. Please amend the abstract as attached.

Allowable Subject Matter

Claim 19 of the amendment filed 5/11/2006 is allowed. The following is an examiner's statement of reasons for allowance of these claims: Nothing in the prior art anticipates or suggests, "using curves to represent a relationship of items related to a particular item positioned at a starting point of the curve, with distance along the curve representing a strength of affinity to the item at the starting point of the curve" in a method for providing graphic visualization of data sets containing a large number of items from said data sets set forth in the claim 19.

The cited reference to Chilimbi et al. U.S. Patent No. 6,330,556, have taught an affinity graph in which a plurality of affinity charts/curves/edges are shown. Chilimbi discloses a weighted affinity is computed for all structure instances for which this pair of fields has an affinity edge, the data fields of Chilimbi meets the claim limitation of "objects". Chilimbi discloses recreating the object affinity graph by picking a root from the set of roots with the

highest affinity edge weight, performing a greedy depth-first traversal of the entire object affinity graph starting from this picked root and visiting the next unvisited node connected by the edge with greatest affinity weight and laying out all affinity graph nodes in the TO space wherein nodes are clustered as a group based on the affinity weights, thus establishing the related items to the principal node picked along the at least one affinity chart/curve/edge by rank of the affinity weights. However, Chilimbi does anticipate the claim limitation of “selectively employing color and shading gradations and curve thickness gradations to emphasize the curve’s role in conveying affinity strength, while placing items so they do not overlap or crowd each other” set forth in the claim 19.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”
